## PC REPAIR TESTIMONIAL

---

The start button on my computer broke. The computer worked fine but after doing some online research I discovered it was a known issue since fixed. My warranty had expired so I was out of luck. Basically, I had to keep my computer turned on round the clock in fear of not being able to start up again.

Checking online for a local repair service, I contacted NetProAZ. Not only did they come to my house to pick up the computer, they fixed it for the quoted price the same day. No bait and switch, no gimmicks, no hidden costs. I'm sure anyone else would have charged me a couple hundred bucks in addition to making me lug the computer in for several days wait. I cannot say enough about the service and work that NetProAZ did and I'm already getting ready to contact them about another computer job I need help with.

Thanks again you guys!
